Professional Summary

Data Scientist with a Harvard graduate degree in Data Science and a strong foundation in machine learning, statistical modeling, and large-scale data analysis. Experienced in building data pipelines, predictive models, dashboards, and automated reporting tools to support data-driven decision-making.

Education

Harvard University — Cambridge, MA
Graduate Degree in Data Science; GPA: 3.62/4.0 — Feb 2025

University of Toronto — Toronto, ON
Honors Bachelor of Science, Statistics and Mathematics Double Major — Nov 2019

Technical Skills

Programming: Python, SQL, R, MATLAB; Pandas, NumPy, Scikit-learn, XGBoost, LightGBM, Matplotlib, spaCy

Data Science: Statistical Analysis, Feature Engineering, Machine Learning, NLP, Time Series, Data Visualization

Tools: Power BI, Tableau, AWS, Git, Excel, LaTeX, LLM APIs

Projects

Automated ETF Analyst Report | *Python, Pandas, Yahoo Finance, Excel, GitHub Actions* — May 2026
- Built an automated Python pipeline to collect ETF holdings, analyst targets, valuation metrics, EPS estimates, and market data.
- Generated a multi-sheet Excel report with ETF summaries, holding-level details, weighted metrics, median metrics, and coverage indicators.
- Added ETF overlap analysis and scheduled email delivery using GitHub Actions, SMTP, environment variables, and repository secrets.

AI-Powered FDA Approval Prediction | *Evergrowth BioHealthcare Capital / Harvard* — Dec 2024
- Collected, merged, and preprocessed 10+ large-scale datasets with 10M+ records from AACT and Cortellis.
- Mapped drugs to disease types with a rule-based matching algorithm, achieving 98% accuracy.
- Built Power BI dashboards and predictive models using XGBoost, LightGBM, and H2O GBM, improving test accuracy by 10%.

Oil and Gas Production Prediction | *Harvard University* — Dec 2022
- Performed exploratory data analysis and applied Lasso regression for feature selection.
- Implemented Random Forest and Gradient Boosting models, increasing test accuracy by 25%.

Markov Chain Model for Casino Profit Maximization | *Harvard University* — Jul 2021
- Used Monte Carlo simulations and a closed-form solution to optimize slot machine winning rates.
- Reduced computation time by 99.8% for rapid scenario analysis.

Experience

Mathematics Instructor — Toronto, ON
Global Education Inc. — Jan 2020 – Present
- Instructed high school and university-level Calculus and Statistics to 50+ students annually.
- Coached AMC and Euclid contestants, with students achieving rank top 1% across Canada.

Financial Analyst (Volunteer) — Richmond, BC
Canadian Hemochromatosis Society — Mar 2013 – Sep 2014
- Analyzed and visualized financial data using Excel to identify trends and actionable insights.
- Prepared financial reports and presented updates to management for organizational decision-making.

Achievements & Interests

Mathematics: Ranked top 1% in both AMC 12 and Euclid Mathematics Contest.

LLM & Automation: Interested in building automation tools, prompt engineering workflows, and practical LLM-assisted productivity systems.

Hardware: Built and maintained a 40+ GPU cluster for deep learning training and cryptocurrency mining.
